Developed for Racing and used by AMA SX riders in USA

NEW GALFER 280 MM FRONT BRAKE KITS FOR MX

GALFER is including in their products the new oversized kits with 280mm discs. Designed and developed by GALFER's R+D and used for Racing by some AMA SX riders over the last seasons.

With the current trend of increasing the front disc size in Off-Road motorcycles, GALFER was not to be outdone and will offer a new brake kit with 280 mm discs for the main Off-Road motorcycle brands. With this new kit the braking will improve substantially, especially under extreme weather conditions or in higher speeds, as happens in high-level competition. So much so that the 280mm oversized discs have been used in the last two seasons of the AMA Supercross Championship with great results.

The new RWSX front kits will include a fixed grooved 280mm disc, a caliper spacer, and a set of the new Sport Racing G1396R sintered brake pads:

HONDA

CRF 250/450 (2015-)

KG082RWSX

FD164G1396R | DF082RWSX | SP060

SUZUKI
